

TAGCAMS Bennu Operations Data Caveats August 17 – November 16, 2018

1. First TAGCAMS image acquired during asteroid operations occurred on October 30, 2018.
2. Eight NavCam 1 images acquired on November 14, 2018 were corrupted by a radiation-induced upset that created an 8x1 pixel artifact of approximately 440 DN that repeated every 440 columns.
