

## **TAGCAMS Bennu Operations Data Caveats August 17, 2018 – February 17, 2019**

1. First TAGCAMS image acquired during asteroid operations occurred on October 30, 2018.
2. Eight NavCam 1 images acquired on November 14, 2018 were corrupted by a radiation-induced upset that created an 8x1 pixel artifact of approximately 440 DN (digital number) that repeated every 440 columns.
3. One NavCam 1 image acquired on December 9, 2018 has a 2-3 pixel-wide under-responsive row due to a radiation event outside of the active pixel area.
4. One NavCam 1 image acquired on December 14, 2018 is a partial image due to a data dropout.
5. One NavCam 1 image acquired on December 16, 2018 is a partial image due to a data dropout.
6. One NavCam 1 image acquired on December 18, 2018 is a partial image due to a data dropout.
7. One NavCam 1 image acquired on December 28, 2018 is a partial image due to a data dropout.
8. One NavCam 1 image acquired on January 3, 2019 has a 3 pixel-wide under-responsive row due to a radiation event outside of the active pixel area.
9. 42 out of 94 NavCam 1 images acquired on January 11, 2019 have DN (digital number) offset/wrapping errors due to a radiation event.
10. One NavCam 1 image acquired on January 18, 2019 is a partial image due to a data dropout.
11. One NavCam 1 image acquired on January 24, 2019 has a 2-3 pixel-wide under-responsive row due to a radiation event outside of the active pixel area.
12. 46 NavCam 1 images acquired on January 25, 2019 used non-commanded image exposure times, 23 out of the 46 images are generally unusable.
13. One NavCam 1 image acquired on January 29, 2019 is a partial image due to a data dropout.
14. Two NavCam 1 images acquired on February 5, 2019 are partial images due to a data dropout.
15. On February 7, 2019 eleven StowCam images of the OSIRIS-REx sample return capsule (SRC) and spacecraft deck were acquired. This is a standard image set that we have been acquiring in cruise and four of the eleven images in this set are quite dark due to the illumination conditions at the time the exposures were acquired.
16. One NavCam 1 image acquired on February 9, 2019 is a partial image due to a data dropout.

17. One NavCam 1 image acquired on February 10, 2019 is a partial image due to a data dropout.
